

2007 - 2008

It's such a cold, cold world.

TULIKIVI

Fireplaces handcrafted to create a naturally radiant environment

Basking in the sun and sitting by your Tulikivi fireplace warms your body in the same way. The radiant heat penetrates deep into your skin to warm you from within. Radiant heat is recognized as one of the healthiest ways to heat your home.

Every fireplace has been masterfully engineered for maximum heat efficiency, utilizing a system of internal flues that direct fire and heat to every stone surface, taking advantage of soapstone's natural heat-retaining properties. They are designed to be aesthetically beautiful, with models that can fit into any architectural setting. This brochure only shows a small sampling of the most popular models sold in North America. There are many choices—in fact with custom options and models—the possibilities are endless.

A family-owned company, Tulikivi is a pioneer in the soapstone industry, reviving the heritage of heat-retaining soapstone fireplaces, while leading the way in technical expertise. Employing over 500 stone and technical experts, Tulikivi is the largest manufacturer in the field. When you purchase a Tulikivi, you receive the safety of a premanufactured fireplace combined with the limitless design possibilities of stone masonry.

- A. Inspired by the mountains that surround it, this 'Boulder Style Fireplace' from Tulikivi matches the rustic décor of this *Big Sky*, Montana home. Custom model.
- B. Tulikivi *TTU 2700* see-through model with massive rough-face veneer, shelves, and columns. Custom Model.
- C. Modern style, Tulikivi's new model, *Valkia*. Standard model
- D. *TLU 2450* Fireplace with bakeoven. Standard model.
- E. Clean lines blend this *TLU 2000/2* combination fireplace with its surroundings. Standard model.

Experience Quality from Beginning to...Never Ending

The Tulikivi experience began over two and a half billion years ago in the Karelian mountain range of eastern Finland. There a rare creation was born, miles beneath the earth's surface, under immense pressure and heat—soapstone. These soapstone deposits are considered some of the world's best in terms of quantity and quality.

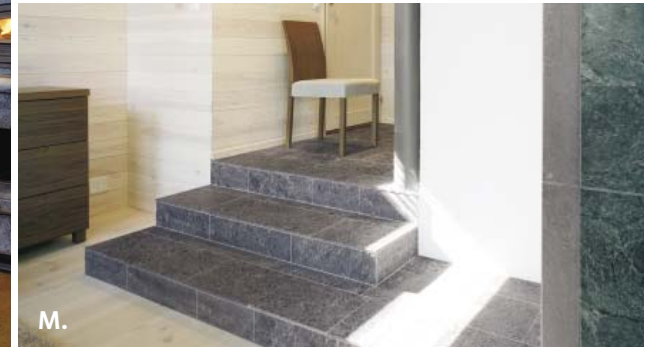

In Finland's arctic climate, fine artisans and engineers have for generations perfected the art of heating with fire and stone. The functionality and efficiency of a Tulikivi fireplace is unique in the North American market.

The Tulikivi factory in Finland utilizes a state-of-the-art laser and electronically controlled system to cut and finish each slab of soapstone. Each stone is tailor-made and grain-specific to make a strong, efficient and lasting fireplace or cookstove.

To assure quality, Tulikivi has obtained both an ISO 9001 and UL listing. Our fireplaces also meet most North American emission requirements, having the strictest emissions and safety tests worldwide.

- F. Tulikivi *TTU 2700* with profiled capstone, extra mantle and a wrap around open bench. Custom model. (c)William Abranowicz.
- G. *TU 2500L*, Tulikivi standard model with decorative green serpentine arch.
- H. *Lohi*—Corner Model with hand-carved salmon and beehive-shaped dome. Custom Model.
- I. Coeur d'Alene architect, Rann Haight, designed this 'Arts and Crafts style' *TTU 2700*. Custom model.

Soapstone Sinks, Countertops, Tiles and Flooring.

No matter what style of cabinets you choose, a soapstone countertop and sink is a beautiful complement to any kitchen or bathroom. Soapstone has been used in homes for hundreds of years for its natural beauty and durability. Naturally resilient, soapstone will not burn, is stain resistant, and requires little maintenance.

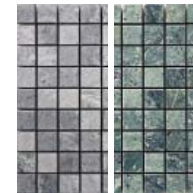

As a flooring, soapstone is noiseless and soft to the touch. It is the perfect choice when used in a kitchen or bathroom where moisture may collect on the surface, because soapstone is water repellent and it is not slippery when wet.

Soapstone can be lathed, cut or polished. Its surface can be shaped, routed, cut, sandblasted or milled either by machine or with hand tools. This offers the interior designer, craftsman and architect an unlimited variety of creative options for personalizing and customizing flooring and tile facades.

For more information on any Tulikivi soapstone product, contact one of our handpicked and knowledgeable North American distributors. North American distributors are listed on the web at www.tulikivi.com.

- J. Soapstone tile from Tulikivi make the perfect shower material.
- K. Soapstone in the kitchen complements any style of cabinet.
- L. Creative interior with natural soapstone.
- M. Hearth extension and stairs made of Tulikivi Classic soapstone tiles.

Friendly to the planet and your environment.

With the world focusing on the effects of carbon emissions, it is no wonder that so many people are turning more and more to low impact energy sources. In the area of wood burning, Tulikivi has engineered the most energy efficient and environmentally friendly wood burning fireplaces in the world. Because there is little difference in carbon dioxide output when wood decomposes naturally and when wood is burned cleanly, burning wood is considered carbon neutral.

At Tulikivi, we believe in outpacing current emissions' standards, thereby exceeding even the strictest regulations in the world. This is a result of decades of engineering designed into every Tulikivi fireplace.

Finnish soapstone seems to be made for these fireplaces, with its massive thermal conductivity and high specific gravity. Once heated, soapstone radiates heat slowly and efficiently for many hours longer than any other natural material.

The heat is not only long lasting, but also extremely soothing and healthy for your body. Combine this with Tulikivi's masterful engineering, soapstone fireplaces are transformed into the most efficient fireplaces known to man.

The firebox is the heart of the fireplace, affecting the entire function of heating and emissions' control. There are two choices in firebox design. The flat grate design burns wood easily and cleanly at high temperatures, keeping emissions low. The newly patented whirl chamber lengthens the time combustion gases remain in the fire chamber thereby creating even cleaner emissions. Heat is then directed over every soapstone surface within the fireplace, taking advantage of soapstone's unique heat-retaining properties.

With the heat output lasting longer, less fuel is consumed. Because of greater efficiency in the fuel burning processes, fewer emissions are released.

Sit back and let your Tulikivi warm your spirit and home while you rest easy knowing you are doing your part to heat your home in an earth friendly manner.

Thanks to the contra-flow principle and the firebox solutions developed by Tulikivi, the energy contained in the wood is released efficiently throughout every heating. Therefore, a Tulikivi fireplace also burns clean and its emissions comply with the world's strictest norms.
